

Dispatch and Navigation

Fleet drivers dispatched by a central authority need help to find their destinations. Paper-based maps are difficult to use – both time consuming and unwieldy. Many target addresses may not be featured on maps.

In-vehicle navigation systems are convenient, safe and reliable, however entering multiple addresses for each set of stops in a daily route is time-consuming. During the day, routes may change, and drivers and dispatchers need a way to communicate quickly, safely and effectively.

Dispatch and navigation services are available for the Contigo 6100 and 6150 GPS tracking beacon and Garmin™ Personal Navigation Devices (PNDs). From the Contigo web application, Dispatchers may send jobs and messages to vehicles, and monitor the status of jobs as drivers accept their jobs on the PND, navigate to the destination and complete these jobs.

Features and Benefits

Feature	Benefit
Send job location and description to driver's PND	› Improve safety by reducing distractions to the driver. Eliminate reliance on paper maps.
Easy to select destinations: <ul style="list-style-type: none"> › From a map click › Type an address › Choose a landmark › Type a Lat/Long 	<ul style="list-style-type: none"> › Save time when dispatching vehicles to job sites. › Leverage your existing Landmarks entries, or just click on any point on a map. › Eliminate time-consuming entry of destinations into the PND.
View Jobs on a Map	› Archive records of vehicle movements.
